

Experiencing with Multi Layer Growing

Multi layer growing under light is catching on. Commercial options are entering the market and multi layer techniques are rapidly advancing. Before investing in a multi layer system you probably want to do some research first: In what form would multi layer growing improve your business model? D-Light offers you a solution to find your way into the world of multi layer systems.

D-Light R & D

The D-Light research and development trolley is a plug-and-play solution for trials of different light spectrums in an easy and cost efficient way. The R&D trolley consists of six layers with a wide range of light spectrums, white coated Danish trolley and buffer trays for watering.

D-Light production and more

After gathering important data with the R&D trolley you are ready to take the next steps into multi layer growing. The D-Light production modules are a perfect solution to improve your cultivation process and storage. D-Light can be interesting for; germination, young plant production, buffering of cuttings and finished plants.

Start with D-Light!

Before investing in a multi layer system you want to do significant research which system fits you the most. D-light offers you everything you need for the initial phase: what plants are suitable and which light spectrum do they need? And: how long can I grow them multi layer?

- ✓ D-Light allows you to test different light spectrums on every layer
- ✓ D-Light layers can be adjusted to every height you wish
- ✓ D-Light is based on the Danish trolley
